

Dear Equestrian Sport Competitor,

We are pleased to have this opportunity to tell you about Pro-Dosa BOOST, a product that our New Zealand-based company first launched over a decade ago. Pro-Dosa International Ltd. is headed by Dr. Corinne Hills, an equine veterinarian, who has spent more than 20 years focusing on the diagnosis and management of lameness, nutrition, and performance problems in competitive horses. She wanted to provide a safe, effective, and inexpensive, complete, balanced, rapidly absorbable, and bioavailable nutrient paste that horsemen and women could administer themselves, with minimal stress for the horse and cost for the owner. As nothing was available internationally that met these requirements, she developed Pro-Dosa BOOST.

Horses under the stress of competition, transport or illness can become dull, go off feed, or fail to drink well. Pro-Dosa BOOST contains significant doses of nutrients that help to support normal appetite, thirst, hydration, muscle cell function, energy levels, and coat and skin condition. Pro-Dosa BOOST also provides balanced amounts of vitamin B1, magnesium, tryptophan, and tyrosine...nutrients that help horses to relax and focus. Pro-Dosa BOOST includes a sizable dose of vitamin C, a good antioxidant which is also necessary for the absorption of iron from the gut; balanced doses of all the B vitamins that play a role in metabolism, red blood cell synthesis, and energy production; trace minerals, included at the level of recommended daily intake, that play important roles in red blood cell production and many other metabolic functions; amino acids which are necessary for protein synthesis and muscle tissue repair and which play an important role in buffering systems; and a balanced dose of electrolytes including calcium, magnesium, and phosphorus as well as sodium, potassium, and chloride.

Studies have shown that it can take up to four days for muscles to recover from exertion, so horses participating in multiple classes on one day or in multiple day competitions may wind up performing considerably below their best. Pro-Dosa BOOST can help enable horses to perform at their best after transport, at the end of a long day of competition, and recover from the first day's efforts, allowing them to perform at their best again the next day.

If you are travelling the day before you are competing, give one tube at least a couple of hours before loading up, or give it the night before, if you are leaving early in the morning. Ensure horses have access to water. For the best results in competition, give one tube 4-8 hours prior to your first class each day. To ensure optimal recovery from training between competitions, give half to one full tube immediately after each hard work-out. For horses that require additional nutritional support, give one full tube then give half of a tube every second day for two weeks. Pro-Dosa BOOST can be top-dressed on feed or applied on the tongue. Pro-Dosa BOOST contains no banned substances and requires no withholding time for drug testing. Please consider any rules of completion that may apply to you before administering Pro-Dosa BOOST as directed.

For more information about how to manage your horses when travelling, please visit our website and read the blog articles on the subject. While you are there, check out articles about how to know if your horse is healthy, first aid kits, Equine Herpes Virus, and vaccinations. Achieving optimal results when competing is about maintaining optimal health all the time.

Kind Regards,

Pro-Dosa International Ltd.
